

# Energy

Human beings need energy in form of electricity, gas, fuel and agricultural. The life without these things is almost impossible like a human cannot live without food and for that gas or fuel is necessary to cook. But due to continuous use of these fuels they are now depleting and it is prediction that in coming few decades, we have to find other alternative for our survival. It can be renewable energy sources like solar power, wind power and even bio-gas. These sources are long lasting and have no adverse effects on environment. The thing is this how to use these resources for the benefit of mankind. In this context Pakistan House is willing to do something like to drive such policies which will help or guide the State apparatus to use these resources.
